CHAITANYA CHAWDA

UI/UX Designer

Pune, Maharashtra | +91 72494 78398 | chaitanyachawda2@gmail.com

PROFESSIONAL SUMMARY

Final-year UI/UX Design student at Ajeenkya D. Y. Patil University, Pune, with hands-on experience across service design, heuristic evaluation, usability testing, and end-to-end product case studies. Named a Top 50 Honoree at Design Pitch 2026 (UXINDIA, Bengaluru). Selected for Demola Global's international co-creation program on AI-driven customer understanding, collaborating with a multidisciplinary team of professionals and students over 10 weeks. Skilled in Figma, user research, service blueprinting, and translating research insights into high-fidelity, user-centred prototypes.

EDUCATION

Bachelor of Design (B.Des) in UI/UX Design *Ajeenkya D. Y. Patil University, Pune | Final Year (Expected 2027)*

AWARDS & RECOGNITION

- Top 50 Honoree — Design Pitch 2026 (UMO Design Foundation): a global showcase for human-centred innovation, held as part of UXINDIA Design Leadership Week 2026 in Bengaluru

SKILLS

- Design Tools: Figma, Adobe XD, Photoshop, Illustrator
- UX Process: User research, interviews, personas, empathy mapping, service blueprinting, user flows, wireframing (lo-fi & hi-fi), usability testing, heuristic evaluation
- UI Design: Typography, visual hierarchy, design systems, responsive design, accessibility
- AI & Emerging Tech: AI-assisted workflows, AI agents for design QA, AI-driven customer research
- Collaboration: Cross-functional and international team collaboration, research synthesis, stakeholder presentation

PROJECTS

Test Mode — AI Usability Testing Agent for Figma *Demola Team Project | 2026*

- Co-designed an AI agent built into Figma that tests a single feature against the project brief (KPIs, stakeholders) and the design system, then routes each issue to the responsible team
- Narrowed 21 testing methods down to 6 that fit post-design, feature-level testing: accessibility, design-system consistency, content/microcopy review, heuristic evaluation, cognitive walkthrough, and brief/KPI alignment
- Designed synthetic stakeholders — AI personas built from the brief — that run every check and deliver one consolidated result

Continuity — HR Employee Handover Platform *Self-Initiated Project | 2026*

- Identified a real HR problem — lost institutional knowledge during employee transitions — backed by industry data (42% of company knowledge held by individuals; $47M average annual productivity loss)
- Ran competitor analysis against BambooHR and Sensay to define the product gap and built a Jobs-to-be-Done framework across HR, Employee, and Supervisor roles
- Designed an end-to-end HR dashboard, AI-suggested task workflows, a three-stage approval process, and an employee self-service portal
- Mapped a Value Proposition Canvas connecting user pain points and gains directly to product features

RC Renewal — RTO Service Redesign *Service Design Case Study | 2 Weeks*

- Conducted 10+ user interviews to map the offline RC renewal journey and surface key pain points through service blueprinting
- Created user personas, empathy maps, and an as-is vs. to-be service blueprint comparing offline and digital renewal flows
- Designed a digital-first solution with OCR/DigiLocker document upload, real-time status tracking, and a digital RC wallet
- Validated the design through usability testing with 5 participants, achieving 40% faster task completion than the existing RTO portal

Parivahan Sewa Redesign *Heuristic Evaluation | 2025*

- Performed a heuristic evaluation of the government Parivahan Sewa portal's Learner's Licence flow against established usability principles
- Identified issues in visual consistency, information hierarchy, and system-to-real-world match, and proposed redesign recommendations

UX for Emerging Technologies — Dementia Care *Collaborative Project with Nimra Khan | 2026*

- Researched the health & security domain, focusing on dementia care for patients, caregivers, and families
- Explored technology-driven approaches to improve patient safety and support caregiver wellbeing

AI Health Care Tracking — Mobile App *UX/UI Case Study | 2025*

- Designed an AI-powered health companion app for elderly users and people with chronic conditions, combining wearable integration, voice interaction, and smart analytics
- Conducted qualitative research (interviews, focus groups) and a quantitative survey using purposive sampling to uncover real needs around medication adherence and emergency response
- Ran secondary research and competitor analysis (Apple Health, Google Fit, Fitbit, Samsung Health) to identify a gap in AI-driven insights for elderly and chronic-illness care
- Defined UX priorities — voice-first simplified interfaces, unified health summaries, and transparent privacy policies — to drive the design direction

CERTIFICATIONS & TRAINING

- AI-Driven Customer Understanding — Demola Global: 10-week international co-creation program with a multidisciplinary team of professionals and university students (Apr 2026)
- AI Tools & ChatGPT Workshop — be10x: Certified in using AI tools for presentations, data analysis, and coding/debugging (Jul 2026)
